

Hyperthyroid Treatment Center

2900 Youree Dr. Shreveport, LA 71104
(318) 869-2280 www.catdoctoronline.com

How much does the treatment cost?

The fee for radioactive iodine (I-131) therapy is \$990.00. This includes consultation before and after treatment, the admission and discharge office calls, initial physical examination, radioactive iodine dose, hospitalization and nursing care, monitoring, and radioactive waste disposal.

If your cat requires a second treatment because the first treatment did not completely resolve the hyperthyroidism within the first few months, there is no charge for the subsequent treatment, provided that all follow up requirements are met.

Retreatment Policy:

We will retreat at no additional charge within 12 months of the original treatment date if the hyperthyroid state is not resolved with the initial treatment.

To be eligible for this "no additional charge" option, you **MUST** have had the required 1 and 3 month rechecks after I-131 therapy has been completed. These tests should be completed within the prescribed 3 month post-treatment period. Should unforeseen circumstances arise during that 3 month time period, an additional 3 months grace period may be allowed. If the 2 follow-up rechecks have not been successfully completed within 6 months of I131 treatment, any cat who then appears to require a second I131 treatment will **NOT QUALIFY FOR THE NO ADDITIONAL COST OPTION** but will be considered a recurrence and there will be a fee equaling 50% of the original treatment fee.

Payment is due upon admission to the I-131 Unit. We accept cash, personal checks, VISA, MasterCard, Discover, and American Express. For clients interested in payment plans, we do accept Care Credit. More information about this option is available at www.carecredit.com.
